*Reasons for Allowance*

6. Claims 1-24 are allowed. The invention of independent claim 1 recites a fuel cell comprising a first electrode, a second electrode, a channel contiguous with at least a portion of the first and the second electrodes, such that a first liquid is contacted with the first electrode, a second liquid is contacted with the second electrode and the first and the second liquids flow through the channel, a multistream laminar flow is established between the first and the second liquids, a current density of at least  $0.1\text{mA}/\text{cm}^2$  is produced. The closest prior art of record, Kenis et al., does not teach a multistream laminar flow is established between the first and the second liquids, a current density of at least  $0.1\text{mA}/\text{cm}^2$  is produced as stated in the claim.
